NumberIslands

PRINTABLE ISLAND

No. 01

First Landfall

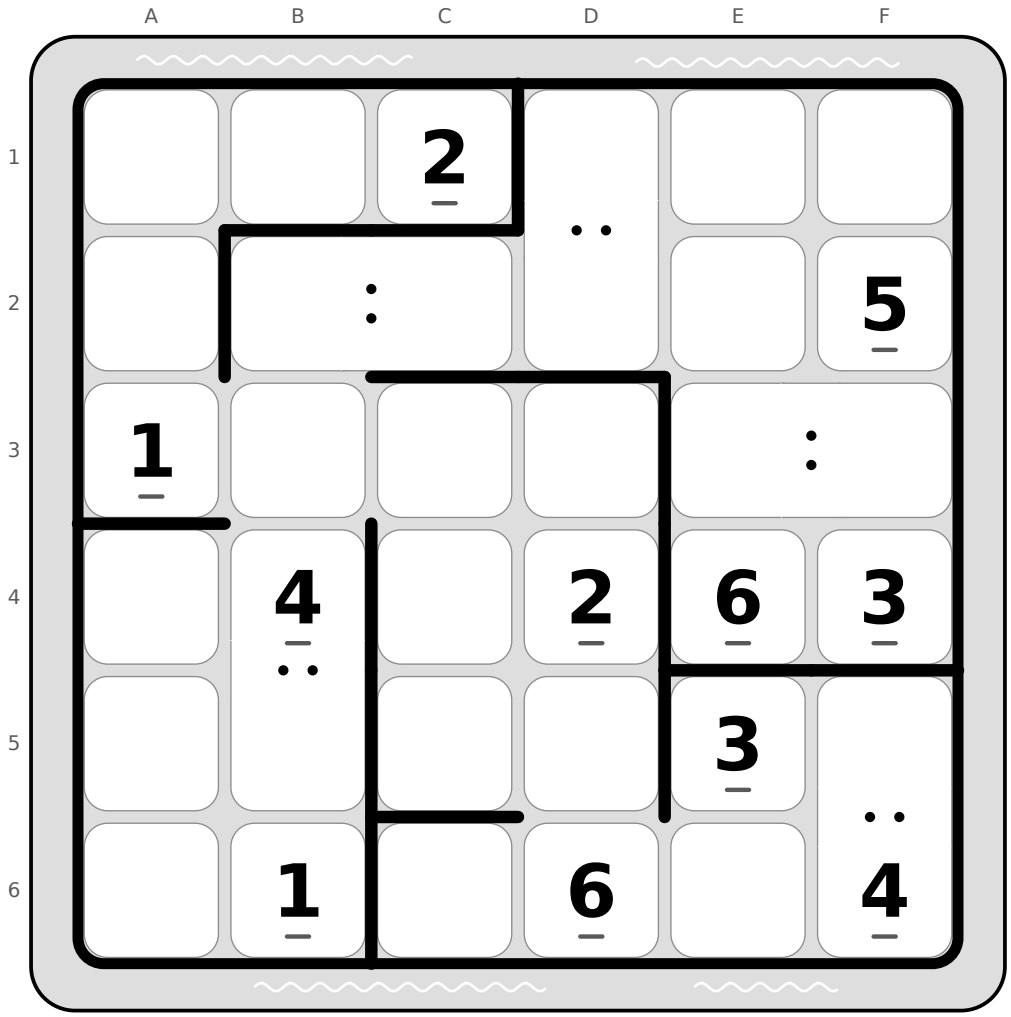

The Shallows · Gentle · Level 1 of 1,001 in the app

DIFFICULTY

1 Find the islands
Draw coastlines in the grey water so the sea splits into 6 islands of exactly 6 squares each.

2 Number them
Write 1 to 6 so every row, every column and every island holds each number once.

3 Read the clues
Thick lines are coastlines. Two dots (••) join two squares of the same island.

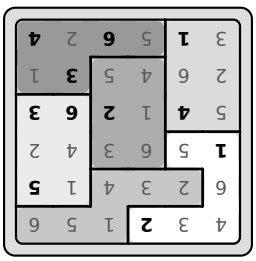

ISLANDS FOUND ○ ○ ○ ○ ○ ○ **TARGET 4:00** **YOUR TIME**_____ **STARS** ☆ ☆ ☆

Stars: 1 for solving, 1 for using no hints, 1 for beating the target time — the same as in the app.

Stuck? Ask the lighthouse.
A region sealed by coastlines with exactly six squares is one whole island.
If a square's row, column and island already use five numbers, the sixth must go there.
Pencil in a light line first; ink it when you're sure.

SOLUTION — NO PEEKING!
